# MyAlarm

Internet Compatible Alarm Control and Reporting

Our iFob Control smartphone app, provides real time control and feedback for compatible IP enabled alarm systems. Multiple sites are supported allowing you to manage your home, office or holiday house whenever you need.

The MyAlarm global platform provides redundancy, exceptional reliability and continuous monitoring of system connectivity.

How to Set Up

Connecting MyAlarm to your Solution 6000

1 **Download MyAlarm iFob Control App** to your iOS or Android device.

2 **Contact your alarm installer** to set up your Solution 6000 with MyAlarm and receive a pairing code.

3 Control and monitor your alarm system!

Personal Reporting Options

Push Notifications

Events are sent as notifications to the app while important alarms are accompanied by a 30 second siren sound.

SMS Reporting

Receive alarm events when you don't have an active data connection or you are in a low signal area.

Email Reporting

This is a low priority mechanism that can be used to record events in your mail system for later review.

Voice Reporting

Never miss important events, receive a customisable voice call to any landline or mobile phone number.

iFob Control Features

Remote Arm/Disarm

Control and monitor your alarm from anywhere in the world with an active data connection.

Multi Area Control

View and individually control multiple areas within the app with a simple scroll and tap.

Zone Status

View zone conditions, alarm activations are highlighted in red and manual bypass if required.

Operate Doors

Operate Garage Doors and Gates with real-time status updates.

Operate Outputs

Outputs can be used to operate a variety of actuators (Sprinklers, Lights, pumps, etc.)

Trouble Events

AC fail, Low Battery, and other system faults can be viewed at any time.

Quick Shortcuts

Build shortcuts that allow quick single button operation of Areas, Outputs and Doors.

App Security

Access to your site can be secured by PIN or Biometric unlock.

Panic Alarm

Use the app as a portable panic button to trigger sirens and report the event.

History Log

Review and filter past events for evaluating alarm activity.
